Education

CMR Engineering College

Bachelor of Technology in Electronics and Communication Engineering; CGPA: 7.8/10

September 2022 – May 2025

Hyderabad, Telangana

Experience

Deepta.ai

Software Engineer I

Hyderabad, Telangana

February 2026 – Present

- Owned multiple features from inception to delivery, translating product requirements into technical designs and scalable backend architectures; contributed to requirement discussions, solution design, and architecture decisions in a developer-driven product environment.
- Engineered distributed data processing pipelines using ClickHouse and MongoDB, processing 100M+ event records with dynamic query generation and event-level filtering.
- Designed and delivered the Cohorts feature end-to-end, including cohort creation, analytics, CSV import/export, and large-scale user synchronization; implemented asynchronous workflows with monitoring, error tracking, retry mechanisms, and multi-cloud storage (AWS S3, GCS), along with custom webhook and MoEngage integrations for real-time lead-to-user conversion tracking.
- Built a customizable dashboard module enabling users to create and pin widgets including pie charts, line graphs, retention charts, flow charts, and path visualizations.
- Implemented a role-based access control (RBAC) system supporting 10+ roles and permission levels, strengthening security and access governance across microservices.

Software Engineer Intern

November 2025 – February 2026

- Developed and shipped 8+ production-ready backend features in Go across multiple internal services, achieving 95%+ test coverage through structured unit and integration testing and peer-reviewed pull requests.
- Designed and implemented RESTful APIs in the API Gateway to manage user invitation workflows for 10,000+ users, applying modular design patterns that reduced onboarding latency by 40% and ensured reliability under load.
- Architected an Email Microservice using Go and Apache Kafka, implementing a producer-consumer architecture for asynchronous event-driven communication between services, reducing email delivery latency by 35% and improving system decoupling.

GrayQuest Education Finance Pvt Ltd

SDE - Backend Intern

Mumbai, Maharashtra

January 2025 – July 2025

- Engineered backend services for 3 major SaaS platforms (ERP, FMS, Admin) using Django REST Framework, improving data processing efficiency by 30% and reducing average API response time by 20%.
- Automated 5+ internal operations using Python scripts, REST APIs, and cron jobs, cutting manual effort by 90% and saving 3+ hours per team member daily; took end-to-end ownership from design through deployment with zero post-release incidents.
- Contributed to backend development by integrating the Flagsmith SDK for feature flag management within a Python microservices architecture, enabling controlled rollouts across 4 environments for 15+ features and maintaining high system reliability.
- Collaborated with Product, QA, and frontend teams to deliver data-driven features and bug fixes across Dev, UAT, Stage, Preprod, and Prod environments, ensuring high availability with 99.9% application uptime.

Technical Skills

Programming Languages: Python, Go, Java

Frontend: HTML5, CSS3, React (Basics), TanStack Router

Backend Development: Django REST Framework, FastAPI, REST APIs, Microservices Architecture

Databases: PostgreSQL, MySQL, MongoDB, Redis, ClickHouse

Cloud & DevOps: AWS (EC2, RDS, Lambda), Docker, CI/CD, Datadog

Tools & Practices: Git, GitHub, Postman, Pytest, Agile, System Design

Projects

Railway Maintenance – Backend

[GitHub Link](#)

• Built a Django REST API for railway maintenance forms with PostgreSQL integration and Datadog monitoring, improving issue detection efficiency by 40%. Deployed on AWS EC2 using Docker.

Tech Stack: Python, Django, PostgreSQL, JWT, AWS (RDS, Lambda, EC2), Datadog, Docker

Admission Module – Full Stack

[Live Website](#)

• Built admission management system using Go and React with Apache Kafka for async email processing, Razorpay payment integration, and automated Google Meet interview scheduling.

Tech Stack: Go, React, PostgreSQL, Apache Kafka with DLQ, Docker, REST APIs, Razorpay, SMTP

Leadership and Achievements

- Solved **730+** problems on [LeetCode](#) and earned **27+** badges; consistently ranked in competitive contests, demonstrating strong expertise in algorithms, data structures, and system-level problem solving.
- Mentored students in **Data Structures and Algorithms** at [Smart Interviews](#) for over a year.
- Expanded expertise through **10+ personal projects** demonstrating backend skills and passion for solving real-world problems.
